

Product Requirements Document (PRD)

Product Name

Dummy Workforce Data Generator

Product Type

Frontend-only utility web app

Overview

A lightweight React-based web application that generates workforce-related dummy data for testing workforce management systems.

The application generates format-valid but fake identifiers such as:

- GSTIN
- PAN
- TAN
- CIN
- Aadhaar
- ESIC ID
- UAN
- Bank Account Number
- IFSC
- Employee IDs

The application runs entirely on the frontend using JavaScript logic.

No backend, database, authentication, payment system, or API is required.

Goal

Help developers quickly generate testing data for workforce management systems without manually entering fake information.

Problem Statement

While building workforce software, developers repeatedly need test values such as:

- Employee IDs
- Aadhaar numbers
- GST numbers
- PAN
- Bank accounts
- ESIC IDs

Manually creating this data is repetitive and slow.

There is no quick frontend tool specifically focused on workforce testing data.

Objectives

1. Generate workforce-related dummy data instantly
 2. Follow format rules
 3. Support bulk generation
 4. Allow easy copy/export
 5. Keep app lightweight and frontend-only
-

Tech Stack

Frontend:

- React
- Vite
- Tailwind CSS

Libraries:

- Faker.js (optional)

Storage:

- None

Backend:

- None

Database:

- None

Authentication:

- None

Deployment:

- Vercel / Netlify / GitHub Pages
-

Features (MVP)

1. Identifier Generator

Generate:

- PAN
- TAN
- GSTIN
- CIN
- Aadhaar
- ESIC ID
- UAN
- Bank Account Number
- IFSC
- Employee ID

User Flow:

1. Select identifier
 2. Enter quantity
 3. Click Generate
 4. View generated results
 5. Copy/export
-

2. Bulk Generation

Generate:

- 1
- 10
- 50

- 100
- Custom count

Output:

- Table
 - Copy button
 - Download CSV
-

3. Employee Profile Generator

Generate full employee dummy data.

Fields:

Employee Info:

- Name
- Employee ID
- Mobile Number
- Email

Compliance:

- PAN
- Aadhaar
- ESIC ID
- UAN

Banking:

- Bank Account Number
- IFSC

Work:

- Department
 - Salary
 - Joining Date
-

4. Company Dataset Generator

Generate:

Company Details:

- Company Name
- GSTIN
- CIN
- TAN

Employee Dataset:

- Configurable employee count
-

5. Copy + Export

Actions:

- Copy single value
 - Copy full dataset
 - Download CSV
-

Functional Requirements

PAN Generator

Pattern:

AAAAA9999A

Example:

ABCDE1234F

Rules:

- 5 uppercase letters
 - 4 digits
 - 1 uppercase letter
-

TAN Generator

Pattern:

AAAA99999A

Example:

DELR12345A

GSTIN Generator

Structure:

- State code
- PAN
- Entity code
- Z
- checksum placeholder

Example:

08ABCDE1234F1Z5

CIN Generator

Format:

21 characters

Example:

U72900RJ2025PTC123456

Aadhaar Generator

Format:

12 digits

Requirements:

- Format-valid
 - Testing-safe
 - Clearly dummy
-

IFSC Generator

Pattern:

AAAA0XXXXXX

Example:

SBIN0001234

UAN Generator

Format:

12 digits

ESIC Generator

Numeric structure

Bank Account Generator

Configurable:

9–18 digits

UI Requirements

Home Screen

Cards:

1. Identifier Generator
 2. Employee Generator
 3. Company Generator
-

Identifier Generator Screen

Inputs:

- Identifier type dropdown
- Quantity input
- Generate button

Output:

Generated list

Actions:

- Copy
 - Download CSV
-

Employee Generator Screen

Input:

Employee count

Button:

Generate Employees

Output:

Table of employee data

Company Generator Screen

Inputs:

- Employee count

Button:

Generate Company Dataset

Output:

Suggested Folder Structure

src/

components/

- Navbar.jsx
- GeneratorCard.jsx
- ResultTable.jsx
- CopyButton.jsx

pages/

- Home.jsx
- Generator.jsx
- EmployeeGenerator.jsx
- CompanyGenerator.jsx

generators/

- pan.js
- gst.js
- tan.js
- cin.js
- aadhaar.js
- bank.js
- employee.js

utils/

- csvExport.js
- helpers.js

App.jsx main.jsx

Non Functional Requirements

Performance:

- Instant generation

Responsiveness:

- Mobile + desktop

Complexity:

- Simple UI

State:

- Local React state only

Data Persistence:

- None
-

Future Scope

- Theme switch
- More compliance generators
- XLSX export
- Better validation
- Search/filter
- Saved presets
